Ancient Traditions of Myrrh

Myrrh has been used for more than three thousand years in perfumery, cosmetic, funerary, and healing traditions. Now that summer is in full swing, many of us spend as much time as possible outdoors. Here are some helpful hints to make your outdoor experiences a little more pleasurable.

Need a good sunburn or after-tan skin protector...try shea butter. This product helps promote healing to sun-damaged skin and is an excellent skin moisturizer.

Worried about mosquito toes...try mixing 10-15 drops of Lavender essential oil with an unscented lotion for a natural mosquito repellent.

Bug bites, cuts, scrapes and stings...try mixing 5 drops of Lavender & 5 drops of Tea-tree essential oil with 1 oz. of Aloe Vera Gel for a quick and natural first aid gel. ☼

What's That Smell?

Perfumes can be composed of one or hundreds of ingredients. Almost all perfumes are classified by type: floral, oriental, woody, etc. However, these terms only describe the overall scent. The individual ingredients are what make each fragrance combination unique. These ingredients are often referred to in musical terms as the: top notes, middle notes and base notes. The top notes are those ingredients you smell as soon as you take a whiff. These notes will generally fade into the middle notes or the heart of the fragrance. And finally, the base notes are what causes a fragrance to have lasting power.

The following are brief descriptions of the primary ingredients in some of the more popular fragrances. (Due to space limitations, we cannot list all of the ingredients in each fragrance.)
